# Mattias Thalén

Analytics Consultant

Uppsala, Sweden  mattias.thalen@me.com  mattias-thalén

mattiasthalen

## Summary

Analytics Consultant with 13 years of hands-on experience in supply chain and manufacturing before moving into consulting. Started on the warehouse floor, learned SQL through an Oracle ERP rollout, and grew into building global analytics platforms used by 500+ users. Now specializing in platform migrations from Qlik to Microsoft Fabric, leveraging LLMs as a daily development tool. Active open source contributor to SQLMesh, dlt, and SQLGlot.

## Open Source Contributions

**Qlik Parser** 2025
github.com/mattiasthalen/qlik-parser
CLI tool written in Go that extracts Qlik scripts from binary files.
- Built a CLI tool to parse and extract scripts from Qlik binary formats.

**Bruin** 2025
github.com/bruin-data/bruin
Open-source data pipeline tool.
- Added support for Microsoft Fabric.
- Added Azure Key Vault support.

**SQLGlot** 2025
github.com/tobymao/sqlglot
Open-source SQL parser and transpiler.
- Added the Microsoft Fabric SQL dialect.

**SQLMesh** 2025
github.com/TobikoData/sqlmesh
Open-source data transformation and orchestration tool.
- Added Microsoft Fabric as a supported platform.

**dltHub** 2025
github.com/dlt-hub/dlt
Open-source data ingestion framework.
- Added Microsoft Fabric as a destination.

## Certifications

**Microsoft Certified - Fabric Data Engineer Associate** Aug 2025
learn.microsoft.com/api/credentials/share/en-us/mattiasthalen/A2A3A7534C2AA848

**Microsoft Certified - Fabric Analytics Engineer Associate** Sept 2024
learn.microsoft.com/api/credentials/share/en-us/mattiasthalen/B2D8389746CF89A2

**dbt Developer** July 2024
credentials.getdbt.com/abdeb34d-9514-4e6d-af0a-24d30f3f51e0

**Qlik Sense Business Analyst** Mar 2024
www.credly.com/badges/8df065ec-b338-4800-bbb7-78375bf685c8

**Qlik Sense Data Architect** Mar 2024
www.credly.com/badges/a4622c11-aa2b-4916-bb63-98d28384db39

**Microsoft Certified - Azure Data Fundamentals** Feb 2023
www.credly.com/badges/65afb248-b4d8-4757-8435-35f8a141f32a

## Skills

**Disciplines:** Analytics Engineering, Data Engineering, Business Intelligence (BI)

**Methodologies:** Data Modeling, Data Warehousing, ETL/ELT, Unified Star Schema, Medallion Architecture, Hook Methodology

**Languages:** Python, SQL, Go

**Technologies:** Microsoft Fabric, Qlik Sense, Azure Data Factory, dbt, SQLMesh, dlt

## Featured Projects

**Cytiva — One Warehouse** 2017
**Tech Stack:** Qlik Sense
Global Supply Chain had no BI for warehouse operations. Everything was built from a sales perspective. Solo, I built a global Qlik app covering inbound, outbound, and inventory management for warehouses in Sweden, the US, Japan, Hong Kong, and Singapore. Data was sourced from Oracle WMS. Replaced a daily emailed spreadsheet with live analytics displayed on warehouse floor screens. Became the most used app in Global Supply Chain and drove weekly global meetings where each site reviewed their numbers. 500+ users, still in use.

## Project History

**Avarn Security — Qlik to Fabric Migration** 2026
**Tech Stack:** Microsoft Fabric, dlt, SQLMesh
The client wanted to future-proof their data platform for ML/AI capabilities. Serving as architect and Qlik/Fabric SME alongside Atea NO, I am designing the migration of the ETL layer for their P&L solution (~15 data sources) from Qlik into Microsoft Fabric. A pilot Power BI app is being built in parallel to validate the new platform for end users.

**Löfbergs Coffee** 2026
**Tech Stack:** Microsoft Fabric, dlt, SQLMesh, Power BI
A multi-country coffee company facing QlikView end-of-life needed a full platform migration. Leading the architecture and development in a team of six, I am migrating ~20 QlikView apps spanning finance, operations, and sales into Microsoft Fabric with Power BI. The new platform enables self-service analytics and opens the door for ML/AI capabilities.

**Jaktia** 2025
**Tech Stack:** Microsoft Fabric, dlt, SQLMesh
A retail company with a brand-new ERP (Omnium) had no analytics at all. In a team of three, I designed and built the data platform from the ground up, covering ingestion, historization, and a self-service consumption layer. Delivered a working foundation before the project was paused by the client to complete their ERP migration first.

**Arctic Paper** 2025
**Tech Stack:** Qlik Sense, dlt
HR lacked visibility into workforce skills across the organization. Solo, I built a talent analytics solution integrating Visma HR, JDE, Maximo, and a homegrown talent system into Qlik. The solution maps skills, grades, and credential expirations across departments, enabling HR to spot skill gaps and plan hiring and training. Used by hundreds of employees.

**Volvohandlarförening** 2025

**Tech Stack:** Azure SQL, Azure Data Factory, dlt

An existing Azure-based data warehouse suffered from poorly built Data Factory pipelines and slow stored procedures. I introduced dlt to replace brittle unnesting logic and refactored key stored procedures, cutting execution time from ~10 hours to ~10 minutes. The platform serves ~140 users across 7 dealerships with sales, invoicing, and HR analytics.

**Swedish Government Agency** 2024

**Tech Stack:** Qlik Sense

The agency needed to move complex budget allocation logic out of the niche tool Planacy into a more maintainable Qlik platform. In a team of three, I rebuilt the allocation logic in Qlik and also documented the entire budgeting process as a Mermaid flowchart, giving the agency their first visual representation of the logic.

**Life Science Corporation** 2024

**Tech Stack:** Qlik Sense

A LIMS upgrade removed the reporting capabilities the organization depended on. In a team of two, I built a new data model in Qlik that replicated and improved on the old reports, replacing static Excel exports with dynamic, explorable dashboards. About 100 users gained back their insights within a couple of months.

**Vinnova – Sweden's Innovation Agency** 2023

**Tech Stack:** Qlik Sense

My first consulting engagement. Vinnova had a mature Qlik Sense environment that needed more horsepower. In a team of five, I built new reports, refactored data models, and compiled data for annual finance reporting delivered to regulatory authorities, where each year brings a new set of measures. Also led the Qlik Sense version upgrade across the environment.

**Cytiva — Project Harmony** 2014

**Tech Stack:** Oracle

A global project to onboard all Cytiva warehouses to Oracle. As the warehouse operations representative for the template organization in Uppsala, I defined WMS rules, labels, and processes. Traveled to the US for the second warehouse go-live, after which the template was complete. This project gave me my first hands-on experience with Oracle SQL.

## Experience

**Enqore**, Analytics Consultant 2025 – present
1 year

**Epical**, Analytics Consultant 2023 – 2025
2 years

**Cytiva**, Various Roles 2010 – 2023
13 years

- Analyst & Process Development Planner (2021–2023): Built the analytics platform for the planning department (production, distribution, material) from scratch in Qlik. Delivered KPI dashboards for ~25 users and leadership, enabling data-driven decisions where there previously was none. Still in use.
- BI Support Specialist (2017–2021): Built global analytics solutions for warehouse operations, including the 'One Warehouse' app. 500+ users across five countries.
- Logistics Specialist (2015–2017): Handled exports, monitoring warehouse shipments and preparing export documentation.
- Deviation Handler (2015): Expert user handling warehouse process deviations. Part of the outsourcing project to set up the 3PL. Started building Qlik apps as side projects during this time.
- Warehouse Associate (2010–2015): Started on the warehouse floor picking, packing, and shipping orders. Built a jQuery web app to automate time reporting, used by 20 consultants. Got noticed and joined Project Harmony, onboarding warehouses to Oracle. First time touching SQL.
